Difference in color due to multiple coats

Tools needed for dyeing

How to dye leather

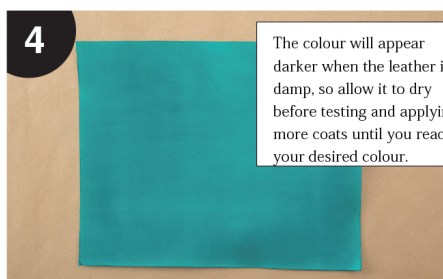

1 Moisten the entire leather with a sponge

2 Mix the dye to your desired color

3 Dye evenly while changing the direction of the brush

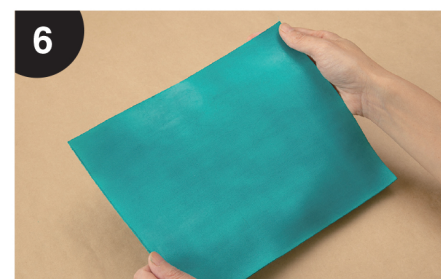

4 After it is dyed to your liking, dry it

The colour will appear darker when the leather is damp, so allow it to dry before testing and applying more coats until you reach your desired colour.

5 Apply leather coat two or three times to fix the color

6 completed

Dyeing tips: Use the dye undiluted or dilute it three times, and test it on scraps of leather to adjust the concentration.
