### WA DYE

Feature Produces deep, subdued tones

Colour 12 colours (100cc only)

Type Alcohol-based metal-complex dye

Usage Dilute with water or thinner

## Difference of Layered Effects

## Tools for Dyeing

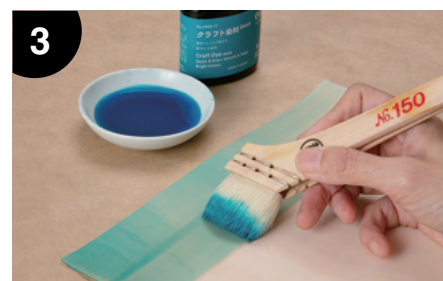

## How to Dye Leather

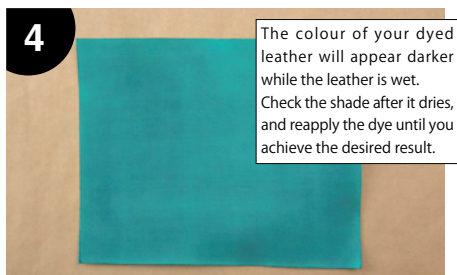

1 Case (dampen) the entire surface with clean water, using a damp sponge.

2 Mix the dye to achieve your desired colour.

3 Apply evenly, changing brush stroke direction to avoid streaks.

4 Let dry completely once the colour is achieved.

The colour of your dyed leather will appear darker while the leather is wet. Check the shade after it dries, and reapply the dye until you achieve the desired result.

5 To prevent the dye from rubbing off or fading, apply 2–3 coats of Craft Sha Leather Lacquer.

6 Finished!

Key Tip : Test on an identical piece of scrap leather first to ensure your dye will achieve the colour you desire.
